offers comprehensive coverage of the most important natural and synthetic fibers used in consumer goods agriculture industry medicine and engineering second edition provides entirely new coverage of topics such as vinyl fibers mammalian fibers related to wool cotton jute silk and kenaf fibers and acrylic fibers

inorganic chemistry catherine e housecroft and alan g sharpe this book has established itself as a leading textbook in the subject by offering a fresh and exciting approach to the teaching of modern inorganic chemistry it gives a clear introduction to key principles with strong coverage of descriptive chemistry of the elements special selected topics chapters are included covering inorganic kinetics and mechanism catalysis solid state chemistry and bioinorganic chemistry a new full colour text design and three dimensional illustrations bring inorganic chemistry to life topic boxes have been used extensively throughout the book to relate the chemistry described in the text to everyday life the chemical industry environmental issues and legislation and natural resources teaching aids throughout the text have been carefully designed to help students learn effectively the many worked examples take students through each calculation or exercise step by step and are followed by related self study exercises tackling similar problems with answers to help develop their confidence in addition end of chapter problems reinforce learning and develop subject knowledge and skills definitions boxes and end of chapter checklists provide excellent revision aids while further reading suggestions from topical articles to recent literature papers will encourage students to explore topics in more depth new to this edition many more self study exercises have been introduced throughout the book with the aim of making stronger connections between descriptive chemistry and underlying principles additional overview problems have been added to the end of chapter problem sets the descriptive chemistry has been updated with many new results from the literature being included chapter 4 bonding in polyatomic molecules has been rewritten with greater emphasis on the use of group theory for the derivation of ligand group orbitals and orbital symmetry labels there is more coverage of supercritical fluids and green chemistry the new full colour text design enhances the presentation of the many molecular structures and 3 d images supporting this edition companion website

featuring multiple choice questions and rotatable 3 d molecular structures available at rearsoned co uk housecroft for full information including details of lecturer material see the contents list inside the book asolutions manual written by catherine e housecroft with detailed solutions to all end of chapter problems within the text is available for purchase separately isbn 0131 39926 8 catherine e housecroft is professor of chemistry at the university of basel switzerland she is the author of a number of textbooks and has extensive teaching experience in the uk switzerland south africa and the usa alan g sharpe is a fellow of jesus college university of cambridge uk and has had many years of experience teaching inorganic chemistry to undergraduates

this comprehensive textbook now in its second edition is mainly written as per the latest syllabi of physical chemistry of all the leading universities of india as well as the new syllabus recommended by the ugc this thoroughly revised and updated edition covers the principal areas of physical chemistry such as thermodynamics quantum chemistry molecular spectroscopy chemical kinetics electrochemistry and nanotechnology in a methodical and accessible style the book discusses classical irreversible and statistical thermodynamics and statistical mechanics and describes macroscopic chemical systems steady states and thermodynamics at a molecular level it elaborates the underlying principles of quantum mechanics molecular spectroscopy x ray crystallography and solid state chemistry along with their applications the book explains various instrumentation techniques such as potentiometry polarography voltammetry conductometry and coulometry it also describes kinetics rate laws and chemical processes at the electrodes in addition the text deals with chemistry of corrosion and nanomaterials this text is primarily designed for the undergraduate and postgraduate students of chemistry b sc and m sc for their course in physical chemistry key features gives a thorough treatment to ensure a solid grasp of the material presents a large number of figures and diagrams that help amplify key concepts contains several worked out examples for better understanding of the subject matter provides numerous chapter end exercises to foster conceptual understanding

the book is a simple to understand low priced chemistry text with many worked out examples in topics which students have the most problems it is intended to serve as a guide to the teaching of chemistry on the one hand and for the student s own understanding of the principles in the areas they feel deficient the material is presented in very simple english and several worked out calculations in problematic areas have been included in addition the presentation is like the teacher is talking to the student and consequently the student should be at ease in understanding the chemistry concepts and the examples given should bring them closer to liking the subject
